2316 Periwinkle CT, Naperville, IL 60540

Senior Software Engineer

Senior Software Engineer with 14+ years of experience designing, developing, and supporting enterprise web and client/server applications. Strong expertise in C#, ASP.NET Core, MVC, Web API, Angular, Entity Framework, SQL Server, Azure, microservices, and CI/CD. Experienced in N-tier and clean architecture, REST and SOAP integrations, secure identity flows, cloud deployments, database performance tuning, and automated testing. Comfortable leading technical design and code reviews, mentoring developers, troubleshooting production issues, and collaborating with product, QA, architecture, and DevOps teams in Agile environments.

EDUCATION

University of Mysore, Karnataka, India

B.S. in Engineering • Jul 1986 - Apr 1990

SKILLS

Languages & Frameworks: C#, VB.NET, JavaScript, TypeScript, .NET 6, .NET Framework, ASP.NET Core, ASP.NET MVC, WCF, WPF, Angular, AngularJS

Front End: HTML5, CSS3, JavaScript, TypeScript, Angular Material, Bootstrap, jQuery, AJAX, Razor views, responsive design, single-page applications

.NET & APIs: ASP.NET Core Web API, REST, SOAP, XML, JSON, gRPC, microservices, middleware, dependency injection, Entity Framework Core, LINQ, ADO.NET

Data & Messaging: SQL Server, Oracle, MySQL, T-SQL, PL/SQL, stored procedures, triggers, views, indexes, SSIS, Azure Service Bus, message-based integrations

Cloud & DevOps: Azure App Service, Azure Functions, Key Vault, Storage, Application Insights, AWS, Docker, Kubernetes, Azure DevOps, Git, TFS, CI/CD

Security & Identity: OAuth 2.0, OpenID Connect, JWT, RBAC, Microsoft Entra ID, role-based authentication, secrets management, secure API design

Testing & Quality: NUnit, xUnit, Moq, Postman, unit testing, integration testing, functional testing, regression testing, code reviews, coding standards

Reporting & Analytics: SSRS, Crystal Reports, Power BI, Tableau, drill-down and drill-through reporting, SQL performance tuning, data migration

Architecture & Patterns: N-tier architecture, clean architecture, MVC, MVVM, SOLID, IOC, repository pattern, design patterns, UML, technical design documents

Ways of Working: Agile/Scrum, requirements analysis, sprint planning, technical leadership, mentoring, troubleshooting, root-cause analysis, deployment, production support

WORK EXPERIENCE

NCR Atleos • Chicago, IL Jul 2021 - Aug 2026

Senior Software Engineer

- Designed, developed, and supported enterprise self-service and transaction-processing applications using C#, .NET 6, ASP.NET Core, and RESTful Web APIs.
- Built modular microservices and reusable business components using clean architecture, SOLID principles, dependency injection, and established design patterns.
- Developed responsive user interfaces with Angular, TypeScript, HTML5, CSS3, Bootstrap, and Angular Material.
- Integrated internal services, third-party platforms, and legacy systems through secure REST APIs, JSON, XML, and message-based communication.
- Created data-access layers with Entity Framework Core and LINQ, and optimized SQL Server queries, indexes, and stored procedures.
- Deployed cloud services with Azure App Service, Azure Functions, Service Bus, Key Vault, Storage, and Application Insights.
- Implemented OAuth 2.0, OpenID Connect, JWT, role-based access control, and Microsoft Entra ID for secure authentication and authorization.
- Containerized services with Docker, supported Kubernetes deployments, and created Azure DevOps CI/CD pipelines for automated builds, tests, and releases.
- Developed unit and integration tests with xUnit, NUnit, Moq, and Postman, improving regression coverage and release confidence.
- Improved application performance through asynchronous programming, caching, query tuning, profiling, centralized logging, and distributed tracing.
- Led technical design and code reviews, mentored developers, and partnered with product, architecture, QA, DevOps, and production support teams.
- Investigated production incidents, completed root-cause analysis, and implemented durable fixes while meeting service-level objectives.

Hill-Rom, Inc. • Chicago, IL Dec 2018 - Apr 2021

Senior Software Engineer

- Delivered full-stack web applications using C#, ASP.NET MVC, Web API, Angular, JavaScript, HTML5, CSS3, and Angular Material in an Agile environment.
- Built Angular components, pipes, services, routing, and HTTP integrations for responsive single-page application workflows.
- Developed reusable business and middleware components with dependency injection, IOC containers, MVVM, MVC, WPF, XAML, and WCF.
- Implemented Entity Framework repositories and LINQ-based data access for SQL Server and Oracle databases.
- Designed stored procedures, scripts, triggers, views, and indexes, and supported SSIS packages for data movement and transformation.
- Created UML diagrams and technical design documents before implementing complex features and enterprise integrations.
- Built unit tests with NUnit and Moq, reviewed code, and promoted application standards, coding guidelines, and engineering best practices.
- Collaborated with business analysts, architects, developers, technical managers, users, and support teams throughout delivery and deployment.
- Provided application maintenance, production support, troubleshooting, user guidance, and release assistance across business-critical systems.

Cyber Coders • Austin, TX Jul 2017 - Nov 2018

Full Stack Engineer

- Designed and implemented Microsoft technology-based business applications and provided technical direction, design reviews, and code reviews to distributed teams.
- Built three-tier applications with C#, ASP.NET MVC, Web API, AngularJS, JavaScript, jQuery, Bootstrap, HTML5, and CSS3.
- Created MVC controllers, Razor views, partial views, shared templates, HTML helpers, web grids, and client- and server-side validation.
- Developed and tested SOAP and REST services and created automated functional and regression testing processes.
- Designed SQL Server stored procedures, functions, views, triggers, indexes, and data-access components using T-SQL and PL/SQL.
- Implemented form- and role-based authentication, sessions, cookies, state management, and secure access to customer-facing features.
- Resolved production issues, delivered enhancements, and supported releases using Azure, CI/CD practices, and cross-functional collaboration.

T Rowe Price • Baltimore, MD Mar 2016 – Apr 2017

Senior Backend Developer

- Participated in the complete SDLC, including requirements analysis, design, coding, testing, deployment, daily Scrum meetings, and defect reviews.

- Developed ASP.NET Web Forms and MVC applications using C#, HTML, CSS, JavaScript, custom controls, master pages, and reusable components.
- Designed application frameworks and patterns for communication with WCF services, exception handling, validation, and layered business logic.
- Implemented ADO.NET and LINQ data access for SQL Server and XML sources, including tables, queries, stored procedures, functions, and views.
- Improved application and database performance through bottleneck analysis, query tuning, indexing, deadlock remediation, and optimized stored procedures.
- Generated drill-down and drill-through reports with SSRS and developed data-rich interfaces using Telerik RadControls.
- Used TFS for source control, work tracking, defect management, and release coordination, and created NUnit tests for functional and performance validation.

Raytheon Technologies • San Francisco, California, United States May 2013 - Aug 2015

Associate Full Stack Developer

- Gathered user requirements and created UML use cases, class diagrams, and sequence diagrams for N-tier .NET applications.
- Designed database schemas and developed reusable data-access components with C#, ADO.NET, Microsoft Application Blocks, and LINQ.
- Created SQL Server tables, views, stored procedures, and optimized queries using Query Analyzer, SQL Profiler, and connection pooling.
- Developed operational reports with Crystal Reports and SQL Server Reporting Services and supported database migration activities.
- Built master pages and managed ASP.NET client- and server-side state using view state, hidden fields, cookies, query strings, application state, and session state.
- Created .NET builds, promoted releases through production, and used TFS and Visual SourceSafe for source control and work tracking.
- Performed unit, integration, stress, regression, and database testing throughout the software development lifecycle.

AAXA • San Francisco, California, United States Nov 2012 - Apr 2013

Web Developer

- Designed and maintained internal interface applications that enabled reliable data sharing across multiple enterprise systems.
- Analyzed interface changes, coordinated work across applications and developers, and maintained internal and external data models.
- Designed Oracle database structures and developed DDL, DML, functions, procedures, and packages for application requirements.
- Defined application security, storage, performance, and database-change requirements in partnership with administrators and configuration teams.
- Led interface maintenance and support activities while following configuration management and SDLC processes.
- Produced requirements, analysis, design, technical documentation, and Microsoft Project schedules for large work efforts.
